

# Matching money to morals

Sustainable investing has been around for many years. It first emerged in the UK around the 1980s with the launch of a number of what were then known as ethical funds. While there have always been investors keen to match their money with their morals, it's fair to say that up until a few years ago, sustainable investing remained a somewhat niche area. However, this is no longer the case – sustainable investing has now moved into the mainstream and many more clients are taking an active interest in how their money is invested.

The trend towards a more sustainable approach has been led by institutional investors such as pension funds and investment foundations. The legislative and regulatory backdrop has facilitated this move with, for example, the introduction of legislation to tackle climate change. As wider society has become much more conscious of environmental and social issues, retail investors have come on board too.

## Percentage of advised client assets in sustainable funds or solutions

Rising retail interest in sustainable investing is reflected in increasing assets under management and fund options. Indeed, research from NextWealth<sup>1</sup> shows that 19% of advised client assets were invested in funds and solutions with a sustainable theme in April 2023.

A remaining issue in the retail market is confusion over what exactly constitutes an Environmental, Social and Governance (ESG), sustainable or responsible investment. Up until recently, the absence of clear definitions has made it difficult for advisers to compare products and providers and to feel confident a fund will adhere to the client's definition of a sustainable investment.

However, in November 2023, the Financial Conduct Authority (FCA) announced the introduction of four investment labels that fund providers can use, along with accompanying disclosures, from 31 July 2024, if their funds meet certain criteria:

- **Sustainability Focus:** invests mainly in assets that focus on sustainability for people or the planet.
- **Sustainability Improvers:** invests mainly in assets that may not be sustainable now, with an aim to improve their sustainability over time.
- **Sustainability Impact:** invests mainly in solutions to sustainability problems with an aim to achieve a positive impact for people or the planet.
- **Sustainability Mixed Goals:** invests mainly in a mix of assets that either focus on sustainability, aim to improve their sustainability over time, or aim to achieve a positive impact for people or the planet.

Funds that do not carry an FCA investment label may still make sustainability claims but will need to provide clear and factual information about what they invest in along with a statement about why they don't have a label.

Specialist organisations, such as SRI Services, have opted to further classify the different styles adopted by sustainable investment managers and filtering these through specific themes. Our own [Sustainable Investment Finder](#), allows advisers to search for funds using filters that draw upon some of the definitions laid down by SRI Services. Please note, these SRI themes must not be confused or misinterpreted as replacing the FCA's investment labels.

# What is meant by sustainable investment?

There are many terms used to describe sustainable investing, such as green, responsible, socially responsible and impact investing. These are often used interchangeably even though they can signify different investment approaches. Traditional ethical investing, for example, typically involves excluding companies from specific 'sin' (exclusion) sectors such as alcohol and tobacco. Impact investing, on the other hand, goes further and involves investing to make a positive social and environmental impact.

Today, the common theme amongst sustainably-themed investments is that they tend to focus to some degree on Environmental, Social and Governance (ESG) considerations, although some funds may concentrate on specific factors such as climate change. The following can be regarded as examples of issues within the three pillars of ESG investing:

## Environmental issues

Climate change, resource depletion, waste, pollution and deforestation.

## Social issues

Human rights, modern slavery, child labour, working conditions and employee relations.

## Governance issues

Bribery and corruption, executive pay, board diversity and structure, political lobbying or donations and tax strategy.

Sustainable investing isn't restricted to just equity investing. It extends across asset classes – there are, for instance, responsibly-managed bond and multi-asset portfolios available to retail investors. Passive and smart beta strategies are also offered by some providers.

## Selecting sustainable funds for your clients

Checking a fund is appropriate for a client is, of course, an important part of portfolio construction. Arguably, this is even more important if a client has expressed certain views on how their money should be invested from a sustainability perspective. A client may, for example, have moral or religious objections to investing in certain industry sectors. While some sustainable managers implement strict sector exclusion policies that may cover these objections, other sustainable managers may invest in these sectors if a company is perceived to be increasingly focused on sustainability as a business.

The key is to check the particulars of each fund's approach; and the FCA's four sustainable investment labels (described on page 3) certainly make identifying a sustainable fund easier.

In addition, SRI Services, an independent and specialist business with over three decades of experience in sustainable investment, has developed a set of 'SRI Styles' to make comparisons easier (these must not be confused with the FCA's labels). SRI Services' classification system is based on the key issues a fund considers (such as sustainability, environmental, and ethical factors), as well as the approach taken by the fund (whether its focused, tilted, weighted or with only limited exclusions). Every fund with a sustainable focus available through our service has been classified as one of these seven styles.

# SRI Styles

SRI Services classify sustainably-themed funds as one of seven SRI Styles. These are designed to help identify funds that may have a particular focus. They differ from the sustainable investment labels introduced by the FCA.

## Sustainability select\*

These funds state they favour companies that offer products and services that encourage more sustainable lifestyles or show sustainability leadership. They also typically avoid sectors that don't help raise environmental and/or social sustainability standards, as well as arms and tobacco companies.

## Environmentally focused\*

These funds state they focus on environmental issues and opportunities. Strategies vary. Funds may focus on a single issue like water, resource management or waste, or broader issues such as biodiversity and climate change.

## Socially focused\*

These funds state they focus on people issues - from employment and education, to diversity, equality and human rights. They typically invest in companies deemed to have positive social practices.

## Ethically focused\*

These funds state they focus on issues relating to personal values or opinions. Most avoid investment in companies that many regard as negative such as armaments, tobacco and gambling companies. They also typically invest in companies with higher environmental and social standards.

## ESG (environmental, social and governance) weighted\*

These funds state that they consider environmental, social and governance (ESG) or sustainability issues when making investment decisions, although how that information is applied varies. Funds in this group may favour companies with higher ESG or sustainability standards, but they don't necessarily exclude controversial companies as the manager may choose to try to encourage higher standards by engaging with company management.

## Limited exclusions\*

These funds typically only exclude a small number of companies. This may typically include some or all tobacco companies or companies that breach commonly-adopted environmental, social or governance (ESG) standards. They may aim to encourage companies to improve their standards.

## Faith based\*

These funds state they focus on faith-based issues. They tend to screen out companies that do not meet certain criteria to invest in assets that align with a recognised religion or faith. Other funds may also be suitable for investors of faith, although their core focus is not religious beliefs.

\*These SRI Styles are based on the SRI Services fund categorisation system.

## Match funds to client needs with our Sustainable Investment Finder

Our user-friendly [Sustainable Investment Finder](#) helps you identify potential solutions for any given client by allowing you to search for funds based on the seven SRI Styles listed above. You can refine your search by selecting additional preferences that reflect a client's aims more closely, such as limiting the results to funds that have adopted an animal welfare policy or exclude manufacturers of armaments.

However, we recommend checking a fund's factsheet, prospectus and/or Key Investor Information Document for full details on its investment approach/policy.

# SRI Styles and client aims

The following table is designed to help advisers match the seven SRI Styles to a client’s sustainable investment aims (these seven SRI Styles are consistent with the primary filter within our Sustainable Investment Finder tool). This table has been produced by SRI Services and is only intended as a guide and should not replace your own due diligence research. SRI Styles must not be confused with the sustainable investment labels introduced by the FCA.

SRI Style name	Sustainability themes			Values led		Tilted	Limited
	Sustainability select	Environmentally focused	Socially focused	Ethically focused	Faith based	ESG weighted	Limited exclusions
<b>Client aim</b>							
General interest in sustainability	✓	✓	✓	✓	?	✓	?
Keen interest in sustainability and positive outcomes	✓	✓	✓	?	✗	?	✗
Wants to avoid coal, oil and gas majors	✓	✓	?	?	?	?	✗
Focused on people and social issues	✓	?	✓	✓	?	?	✗
Wants to avoid arms, tobacco and other damaging industries	✓	?	?	✓	?	?	?
Wants to encourage companies to improve	✓	✓	✓	?	✗	?	?
Animal welfare focus	?	?	?	?	?	?	✗

Fund strategies vary within these SRI Styles and there is crossover between many of them.

-  **Yes** – most funds in this style will meet this aim
-  **Maybe** – many of the funds in this style will meet this aim
-  **No** – most funds in this style will not meet this aim

# ESG standards and practices

A number of principles and standards act as a common reference point for investment managers adopting a responsible approach. A selection of these are shown below. Ensuring an asset manager has signed up to some of these codes or standards could form part of the due diligence process when selecting a responsible fund manager on behalf of a client.

The UN-supported [Principles for Responsible Investment](#) (PRI) is regarded as the world's leading proponent of sustainable investment. It encourages investors to use sustainable investment to enhance returns and better manage risks. It has issued a set of voluntary and aspirational investment principles that all signatories must commit to (shown opposite). Around the world, there are now over 6,000 signatories to the PRI<sup>2</sup>. Signatories are regularly assessed on their progress against targets and peers with ratings allocated to certain indicators.

## The UN's Sustainable Development Goals (SDGs)

Launched in September 2015, these 17 high-level goals form a blueprint to achieve a better and more sustainable future for all. The aim is to achieve them all by 2030. A short description of each SDG appears in our [glossary of sustainable investment terms](#). These goals are influencing asset managers in many ways. Firms may take these into account when analysing companies as part of the stock selection process, for instance, and when engaging with the companies as shareholders. Some asset managers have also launched SDG impact funds.

2. Source: PRI Signatory Directory (2023).

## What are the Principles for Responsible Investment?

The six Principles for Responsible Investment are a voluntary and aspirational set of investment principles that offer a menu of possible actions for incorporating ESG issues into investment practice.

**Signatories commit to the following:**

- 1 We will incorporate ESG issues into investment analysis and decision-making processes
- 2 We will be active owners and incorporate ESG issues into our ownership policies and practices
- 3 We will seek appropriate disclosure on ESG issues by the entities in which we invest
- 4 We will promote acceptance and implementation of the Principles within the investment industry
- 5 We will work together to enhance our effectiveness in implementing the Principles
- 6 We will each report on our activities and progress towards implementing the Principles.

Source: PRI.

## The UK Stewardship Code

The [UK Stewardship Code](#) sets high expectations of those investing money on behalf of UK savers. It consists of 12 principles for asset managers and asset owners. It establishes a clear benchmark for stewardship as the responsible allocation, management and oversight of capital to create long-term value for clients and beneficiaries leading to sustainable benefits for the economy, the environment and society.

## Climate Action 100+

[Climate Action 100+](#) is an initiative taken by the investment industry to ensure the world's largest corporate greenhouse gas emitters take the necessary action on climate change. To date, 700 investors with more than \$68 trillion USD in assets under management have signed on to the initiative<sup>3</sup>. Signatories engage with companies to curb emissions, improve governance and strengthen climate-related financial disclosures.

## Task Force on Climate-related Financial Disclosures

The [Task Force on Climate-related Financial Disclosures](#) (TCFD) develops voluntary, consistent climate-related financial risk disclosures for use by companies in providing information to investors, lenders, insurers, and other stakeholders.

# Four things to consider when selecting a sustainably-managed fund

As outlined on page 3, one way to ensure any particular fund meets certain standards is to check whether it contains an FCA investment label or not (introduced from 31 July 2024). Where one is held, the fund manager is required to provide clear and factual information on what the fund's goal is and the approach to achieving it. Annual updates on progress towards the goal are also required.

Over and above an FCA investment label, you may wish to consider the following as part of your due diligence process:

## 1 Is the fund's management consistent with the client's aims?

Many clients may be satisfied that a fund is managed on a broadly responsible basis, whereby ESG factors are considered as part of the investment process. Stocks from certain 'sin' sectors may be included, for example, if the company has demonstrated that their ESG credentials are moving in the right direction. However, some clients may state that investment in certain stocks or industry sectors should be completely avoided due to ethical, moral or religious considerations. It is therefore important to check whether the investment manager or fund has an appropriate exclusion policy in place that covers a client's concerns.

## 2 How committed is a fund manager to sustainable investment?

One way to establish whether an asset manager is committed to sustainable investment is to check whether they are a signatory to certain standards or make specific pledges on areas such as climate change or the UN's Sustainable Development Goals. A manager may be a signatory to the Principles for Responsible Investment (PRI), for example. As part of this commitment, signatories are assessed on their progress towards certain targets and against peers. Asset managers frequently make PRI Assessment Reports available to investors in order to demonstrate how they are performing in this area.

In addition, asset managers may publish their engagement and voting policies as well as disclosing their voting records and other relevant stewardship and sustainability reports or commitments. These can be analysed to help establish a firm's ESG credentials.

### 3

## The fund manager's investment process and resources

Funds with a sustainable theme, like all other funds, will be managed in a certain way. As such, researching an asset manager's investment process may be an important factor in your due diligence process. Some may claim that their ESG research process goes further and deeper than others, for example. Some asset managers may have dedicated ESG teams or have groups focused on specific activities, such as stewardship. If the fund takes a passive approach, consideration could be given to how the index is constructed and how the constituents are weighted within that index.

### 4

## Sustainable fund ratings

In the same way as a fund can be assigned a rating based on its performance or the perceived robustness of its investment process, it can also be rated in terms of its ESG credentials. Square Mile Investment Consulting & Research, for example, issue 3D responsible ratings for sustainably-managed funds. SRI Services have also announced that they plan to launch a badge that will be awarded to funds based on certain ESG criteria. It is important to note ratings services may analyse different factors or score certain criteria in different ways when arriving at their ratings.

## Fidelity: your home for sustainable investing

As interest and assets in responsibly-managed investments continue to grow, we are committed to providing advisers with all the information they need on this area of investing. This ranges from helping advisers identify appropriate solutions for their clients through the provision of research and tools as well as educational guides, client-facing materials and fund partner insights.
